

Dr. Stefan Mandić-Rajčević has graduated from the Faculty of Medicine of the University of Belgrade (Serbia) and went on to do a Ph.D. in Occupational Medicine and Industrial Hygiene at the Faculty of Medicine and Surgery of the University of Milan (Italy). He attended his Ph.D. degree in February 2014 by successfully defending his dissertation titled “Exploring Novel Approaches To Pesticide Exposure And Risk Assessment – Exposure And Risk Profiles For A Safe Pesticide Use In Agriculture.” Currently employed at the Department of Health Sciences of the University of Milan, and the International Centre for Rural Health of the San Paolo Hospital (WHO Collaborating Centre). His main interests lie in Occupational Medicine, Toxicology, Exposure and Risk Assessment, Modelling, Risk Communication and Data Analysis. For the last seven years, he has been working on improving research and health surveillance reporting and data mining by implementing advanced techniques of data collection and storage using open source tools. His experience extends to training graduate and post-graduate students, as well as other research staff. He has published his research in topics mentioned above in International peer-reviewed Journals and regularly spoke in International Conferences.
